

# PRESS RELEASE

## **RDS, the onboard weighing supplier of choice for the UK quarry market.**

The RDS Loadmaster range has long been the on-board weighing system of choice for the UK quarry industry and worldwide. This market leading product has proved its reliability and consistent accuracy over many years and this is due to a number of factors including the excellent product support offered by fully trained exclusive RDS specialists and the wide range of products offering a solution for every on-board weighing need.

The Loadmaster weighs the weight from the hydraulic pressure needed to lift the bucket, turning this into an electronic signal that is then displayed in the cab. The instrument is very simple to use, with a clear graphic display and all the required functions available at the touch of a button.

Alongside such features as automatic, speed compensated dynamic weighing and a live-last bucket tip-off facility, the Loadmaster offers a 1000 store internal database for product and customer stores and is compatible with a specially designed computer management programme – Load 200.

Available in three basic forms, the entry-level Loadmaster 800, the data-handling Loadmaster 8000 and the approved for trade Loadmaster 9000, RDS also offers the widest range of optional extras on the market. These optional extras, ranging from printing to telemetry data transfer, allows the customer to bespoke the system to suit their needs exactly, whether it be increased data storage, data handling capabilities or the simple printing of a load.

After over 15 years in the market the Loadmaster has developed into the foremost on-board weighing system available today and fully deserves its place as the preferred weighing system to quarries not just in the UK , but worldwide.

## **RDS Technology Ltd - leading hydraulic weighing technology into the 21<sup>st</sup> Century**
